Bobike mini+: a safe choice

Nothing is as wonderful as cycling with your child between your arms. In a safe bicycle seat, of course! By purchasing the Bobike mini+, you have made the right choice. The Bobike mini+ is a safe and comfortable front-mounted seat which is approved to European safety standard EN 14344.
To ensure proper and safe fitting, it is important to read this user manual carefully first, and then follow the instructions carefully. Keep this user manual in a safe place in case you need to refer to it at a later date. If you have any questions about fitting or using your Bobike mini, please ask your stockist or visit www.bobike.com. Dremefa, the manufacturer of the Bobike mini+, wishes you many happy, and above all safe, bicycle rides.

From 9 months to 3 years

The Bobike mini+ is suitable for carrying children aged between 9 months and a maximum of 3 years, or up to a weight of 15 kilos. We recommend that you use the seat only when your child is able to sit well on its own, at least for the duration of the ride. Older or heavier children can be safely carried in a rear seat such as the Bobike maxi or Bobike junior.

Accessories

If you want to use your Bobike mini+ on several bicycles then ask your stockist for additional assembly sets, available separately. The following accessories are also available for the Bobike mini+: windscreen, handlebar with support role, ATB bracket mini for mountain bikes with an A-head (no steering column), belt pads and foot protector plates mini. In addition to seats for larger children, Bobike also offers jacket protectors, saddle spring protectors, tyre levers and footrests.

Maintenance

Bobike child bicycle seats are simple to maintain. The upholstery is attached with Velcro and can be easily removed. The upholstery can be washed by hand and the seat cleaned with a mild detergent. Do not use any abrasive cleaning agents.

Guarantee

Bobike guarantees that the supplied child's cycle seat is manufactured from durable materials and subject to strict quality controls. Bobike therefore guarantees this product for a period of one year. In the event of a claim, please present your receipt to your stockist.

Seven steps to a correctly secured Bobike mini+

The Bobike mini+ complies with the new European safety standard EN 14344 and is a very safe child bicycle seat. Of course, the assembly must be carried out in the correct way. Run through the seven steps below as accurately as possible.

1 (Drawing 1) Secure the mounting bracket (D) to the steering column. The underside of the mounting bracket must rest on the column head. Tighten the nuts firmly using the supplied fitting key (G)*

2 (Drawing 2) Now mount the seat by inserting the two mounting rods (H) into the rearmost holes of the mounting bracket (D) until the rods cannot go any further into the bracket.

3 (Drawing 3) Set the handlebar of your bicycle straight and check whether the front seat is correctly mounted.

4 (Drawing 4) Determine the correct height of the foot rests (F) by measuring the length of your child's lower leg, from below the knee to the sole of the foot. This measurement must match the distance from the seat to the underside of the footrest. Using a screwdriver, mount the footrests to the footrest tube (E)** at the correct height.

5 (Drawing 5) Push the locking pin (I) through the hole in the mounting rod (H) or attach a padlock (Ø 3 mm) as an anti-theft device. The locking pin or lock serve as a safety lock for the seat and you must therefore always use one of them.

6 (Drawing 6) Now sit your child in the Bobike mini+ and check that the chosen setting is correct. If you want to change the setting, always remove your child from the seat first. If the height between the handlebar and seat is insufficient, you can place

the handlebar higher. By using the foot straps (J) you can prevent your child from catching its feet between the spokes. Adjust the length of the safety belt (B).

7 (Drawing 7) To open the safety belt, push the buckle to the side and press the round surface in. Ensure that the buckle remains upright while depressing it.

Extra attention to safety

- After fitting the Bobike mini+, go on a short test ride with your child. Check that all the components have been fitted firmly enough and adjust as necessary. Repeat this check regularly from time to time.
- Additional mounting kits are available separately, so that you can use the Bobike mini+ on several bicycles. Ask your stockist for information.
- The Bobike mini+ may be installed only on a steel or stainless steel steering column with a diameter of between 20 and 28 mm.
- The Bobike mini+ is designed for children up to a maximum of 3 years old or 15 kg in weight. Check in good time that your child is not too old, heavy or large for the Bobike mini+. Older children can be conveyed safely in the Bobike maxi+ or Bobike junior. Visit www.bobike.com for more information.
- Always fasten the safety belt and foot straps, even when the seat is not in use.
- Ensure that your child is always properly protected against the cold and rain when in the seat. Remember that your child is sitting still in the seat and will therefore get colder more quickly than the cyclist.
- Check regularly that no body parts and/or articles of clothing interfere with rotating or moving parts of the bicycle, e.g. a foot between the spokes or a finger in the brake mechanism.
- Check that your child cannot touch any sharp parts such as brake cables.
- On some bicycles it is possible to move the saddle back a little give more room between the seat and the cyclist.
- To increase the turning angle of the handlebar, it may be advisable to set it higher. If you are unable to turn left or right more than 45 degrees, a different handlebar must be mounted.
- Check whether the use of the Bobike mini+ is legally permitted in the country where you wish to use it.
- The cyclist must be at least 16 years old in order to convey a child in the Bobike mini+. The law in this area can vary by country.
- Ensure that your child is always protected by means of a properly-fitting safety helmet.
- The seat can become very hot if it is exposed to direct sunlight for any length of time. Remember this before sitting your child in the Bobike mini+.
- The seat is not intended to be mounted on a moped.
- If the bicycle is transported on top of or on the back of a moving car, the Bobike mini+ must be removed. The air turbulence can damage the seat and the mounting, resulting in a hazardous situation.
- Check that your child cannot operate any locks or other blocking devices present on the bicycle while seated in the Bobike mini+.
- Never convey two children in a single seat.
- The seat must always be replaced following an accident, even if there is no visible damage. Ask your stockist for information.
- Warning: Using the Bobike mini+ may influence the steering behaviour of the bicycle.
- Warning: The Bobike mini+ must not be used if any component does not function properly.
- Warning: The seat and/or the components must not be modified. To do so will void any claim under guarantee and/or liability.
- Warning: Do not attach any extra baggage to the Bobike mini+. If you are carrying extra baggage, place it in the opposite position to the child so that the weight is evenly distributed on the bicycle. Here, you should be able to make use of a front baggage carrier or a rear baggage carrier, possibly with pockets.
- Warning: A bicycle seat such as the Bobike mini+ influences the way you ride on your bicycle. Pay extra attention therefore to steering, balancing and braking.

- Warning: Never leave your child alone in the seat if you leave the bicycle parked against a wall or on its stand. The child could have a nasty fall.

* With a tightening torque of 8 Nm.
** With a tightening torque of 3 Nm.

Other Bobike bicycle products are:

- Bobike maxi+ child bicycle seat
